Post Procedure

After your **TICKLE LIPO** procedure, you will recover for approximately 15 to 30 minutes. Depending upon your tolerance for pain, you may require post procedure prescribed pain medication or simply an over the counter pain reducer as the tumescent anesthesia lasts for several hours. Patients are encouraged to walk, move around and assume normal daily activities. Patients should refrain from exercise for two weeks and should avoid soaking in hot tubs for 7 days immediately following the procedure. Patients will be required to wear a medical compression garment for 24 hours after your incisions stop draining. This is required to facilitate the re-seating of the skin and to achieve a great overall clinical result.

When will I see results?

You will start to see results immediately after the reduction of initial swelling which typically lasts 2 to 5 days. Continued improvements will occur the next three to six months providing you follow a well balance diet and exercise regularly.

Areas that can be treated:

- Abdomen
- Arms
- Back/Flank/Waist
- Chin, Cheek & Jowls
- Knees – Inner
- Hips
- Thighs - Inner & Outer
- Male Breast
- Female Breast Reduction

TICKLE LIPO

"Body sculpting has never felt so good!"

TICKLE LIPO

Quick
Comfortable
Smooth Results

FDA approved **TICKLE LIPO** is the very latest in fat removal and body sculpting. Internationally known as Nutational Infrasonic Liposculpture (NIL), this advanced technology was developed in Europe and designed to complement your liposuction experience. Patient safety, comfort and clinical excellence have been validated by thousands of **TICKLE LIPO** patients all around the world.

Patients rapidly coined the term **TICKLE LIPO** because of the tickling sensation experienced during the procedure. Imagine undergoing a surgical procedure expecting pain and then in fact giggling during the procedure….most experience this side effect of the vibration.

The movement and vibration of the **TICKLE LIPO** cannula act as a pain blocker in the same way that scratching relieves irritation. The process is known as “The Gate Control Theory”.

The patented movement of the **TICKLE LIPO** cannula enables it to glide through fatty tissue while delivering local anesthesia and removing fat with little or no pain. The cannula is also able to maneuver through fibrous or tougher areas for better body sculpting, less surgery time, less bruising and reduced recovery time.

Leading surgeons acknowledge that **TICKLE LIPO** is revolutionary because it allows them to perform liposuction in an in-office environment while the patient is awake, delivering excellent clinical results safely and comfortably to patients.

Patient Benefits

- No general anesthesia
- Little or no discomfort
- Patient safety
- Permanent removal of fat cells
- Quick recovery period
- Look great immediately
- Superior bodysculpting
- Convenient
- Affordable
- Easy

Safety

TICKLE LIPO does not generate heat and has a safety feature which shuts off the system if non-fatty tissue is encountered. The infrasonic energy used to break up the fatty tissue ensures minimal damage to the fat and surrounding tissue. This leaves healthy tissue in place for better skin retraction.

Pre-Procedure

Before the procedure you will discuss with your doctor the areas to be treated, contraindications, pre-existing conditions and pain tolerance. Lab work and a physical will be completed several weeks prior to the surgery.

Procedure

TICKLE LIPO is a minimally invasive procedure which takes 1 to 2 hours. Through tiny incisions, numbing tumescent fluid is infused using a **TICKLE LIPO** vibrating cannula. Once numb, your doctor will use a **TICKLE LIPO** vibrating suction cannula, which is specially designed for the area of your body being worked on, for body sculpting and fat removal.
